

Photoshop Project 2: Making Wallpapers

In this project, you will be designing your own Desktop wallpaper. Here are some examples of what you will be creating:

1. Make a new photoshop image that will be large enough to cover your desktop. On these computers the desktops are 1440 pixels wide and 900 pixels tall

2. In making your desktop background, you must use the following tools:

- Brush Tool
- Gradient Tool
- Text Tool
- Layer Styles

3. The subject of the wallpaper is entirely up to you. You can use the design I suggested in class for at least one wallpaper, but try to branch out and design your own wallpaper as well. You must hand in a minimum of 3 wallpapers, one of which you will select for evaluation.

Some resources to investigate:
